

## *Environmental Policy*

We believe that every one needs to take responsibility for conserving our environment and precious natural resources. We express our responsibility by developing and selling products, systems and services which help users conserve energy.

In doing so, we believe we must use manufacturing methods, technology and working practices, which reduce waste and conserve resources. We believe that all such methods are not just good for the environment but also have reasonable economic return. We believe in continuous improvement for reducing waste.

**Group Chief Executive Officer**
